

Main Goals of the DA Manager:

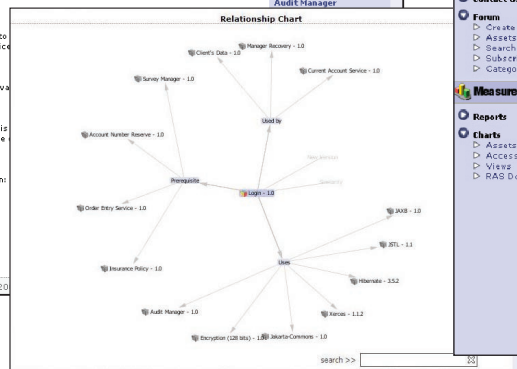

- SOA Governance
- Reduce Duplicated Development
- Cost Savings through Reuse Practices
- Comply with Enterprise Architecture
- Measure Return on Investment

Main Features of the DA Manager:

- Management of software development assets (services, components, messages, schemas, etc.)
- Flexible metamodel (attributes and relationships between assets) for publishing and searching for assets
- Collaboration mechanisms: RSS, e-mail alerts, discussion forums, approval workflow and feedbacks
- Integration with the development environments (IDEs, Source Code, management and windows agent)
- Simple and accurate impact analysis graph
- P2P federation (asset sharing and searches in distributed repositories)
- Embedded UDDI v2
- Extensible reports and ROI metrics
- Role specific views, strong security and audit mechanisms
